Products

MADE OF
100%
RECYCLED
MATERIALS

koberg

colourful

This unique collection consists of a wide variety of shapes and sizes which can be easily combined with each other. All bins from this collection are produced in the same way. The products are waterproof, frost-resistant and provided with a UV-resistant lacquer. A large part can also be fitted with castor wheels most of which are recessed, so that the wheels are not visible.

SUSTAINABILITY

Colourful products fit seamlessly into the pursuit of a sustainable world. The products in the colourful line are being produced in a fully documented and traceable production process. They are made from recoverable raw materials (polystyrene (PS)) and discarded products are recycled. Production takes place in Germany, resulting in short logistic lines.

NL | Deze unieke collectie bestaat uit een grote diversiteit aan vormen en maten welke onderling goed te combineren zijn. Alle bakken uit deze collectie worden namelijk op dezelfde wijze geproduceerd. De producten zijn waterdicht, vorstbestendig en voorzien van een UV bestendige lak. Ook is een groot deel te voorzien van zwenkwielen waarvan de meeste verzonken, hierdoor zijn de wielen niet zichtbaar.

DUURZAAMHEID

Colourful producten passen naadloos in het streven naar een duurzame wereld. De producten in de Colourful-lijn komen tot stand in een volledig gedocumenteerd en traceerbaar productieproces. Ze worden gemaakt van terugwinbare grondstoffen (polystyrol (PS)) en afgedankte producten worden gerecycled. De productie vindt plaats in Duitsland waardoor sprake is van korte logistieke lijnen.

nibe certificering

In opdracht van Plantinum heeft NIBE een Levenscyclus (hierna LCA) opgesteld van de gerecyclede kunststof plantenbakken serie Colourful .

NIBE is een toonaangevend onafhankelijk adviesbureau in duurzaamheid, expert in het opstellen van LCA's en het inzichtelijk maken van milieu-impact. NIBE adviseert professionals in de bouwsector ambitieuze, realistische, wetenschappelijk onderbouwde duurzaamheidsdoelstellingen vast te stellen en helpt bij het realiseren van hun duurzaamheidsambities.

Een levenscyclus analyse (LCA) is een effectieve, data-gedreven manier om de klimaat- en milieueffecten van een product in de gehele waardeketen te beoordelen. In essentie beantwoordt het de vraag: wat is de milieu impact dat het product heeft op de wereld? Het resultaat van de LCA wordt beschreven in een Environmental Product Declaration (EPD). Dit is een gestandaardiseerd certificaat.

Zie hiernaast de belangrijkste aspecten die in het certificaat naar voren zijn gekomen.

Benieuwd naar de uitgebreide levenscyclus analyse? Neem contact met ons op!

PRODUCT DESCRIPTION

A container used for plants made from 100% recycled polystyrene. The container can be used in- and outdoor. Jago has a return system in place, encouraging their clients to return their containers after use. The returned containers are used as new raw materials for the next generation recycled containers. The containers have a circularity indicator (MCI) of 64%.

DESCRIPTION OF THE MANUFACTURING PROCESS

Raw materials enter the factory and are stored in the factory. The most important raw materials are polystyrene (recycled granulate) and paint (liquid in cans). The polystyrene granulate is heated in an extruder and injected with a temperature of 200-220 degrees Celsius and under high pressure in a mould. The injection moulding process can take between 40 seconds and 12 minutes, depending on the size of the container. When the process is finished the mould is opened and the container is removed.

When the product is cooled it is finished by hand using tools such as a surface sanding machine. The containers are painted in a spraying machine. The machine is open and the paint spraying is done by hand. The space is suctioned and the air is treated in a filter.

The painted containers are transported to a drying room where they are left to dry for 4 hours up to 10 days. This process is passive and does not require any energy.

The containers are packaged using plastic bags and carton for protection. The product is stacked and placed on a pallet, ready for transport.
