**The natural collection is a large collection of basic and design planters all recognizable for their natural finish. All items in this collection are made from the strong material fiberstone. The look and feel are almost indistinguishable from real and more expensive natural stone. Because of the various sizes there will be a solution for any place.**

# earth

fiberstone

Bring the beauty of mother earth into any interior or garden with the earth collection of fiberstone. Square shaped pots are inspired by the rugged motif of the salt flats of Bolivia, while the round shapes with subtle structures give the feeling of strolling in a Moroccan desert. The fiberstone material and UV resistant coating allows to place the earth collection in any climate. The earthy colours provide a serene and natural appearance.

We think this would be the outcome when the rough meets the modern. The urban collection brightens up every space and is a 'not to be missed'. The medium to outsized planters come in three different well-known fiberstone shapes: the orb, the patt and the charlie. The unique concrete finish does its work well both outside and inside.

# raw

ficonstone

**Modern shapes with a tough character. Say hello to the raw collection, an assortment of pots we cannot ignore. The raw collection is at its best in a spacious environment where it can stand on its own. But, it also fits perfectly in a more characteristic décor, because we all know opposites attract. The sprayed-cement finish and deep rusty colour give this collection a unique appearance.**

# rough

fiberclay

The rough collection is the rebellious one of the fiberstone family. With its 'less is more' mentality, the rough collection focuses on the tough character of the pot. The collection, with a fiberclay basis, consists of modern planters with the same characteristic finish in many different colours.

# instructions

## indoor

- Cover the inside with a water-resistant inner tray or pond liner.
- Put the planter in the right place.
- Fill the planter with 1/3 of clay pebbles. These contribute to the water management and make sure that your plants grow better.
- Then fill the planter with 2/3 of potting soil and place the plant in the planter.
- Lastly you can choose to cover the soil with a decorative layer of clay pebbles, bark chips or groundcover plants.
- After filling the planter, we recommend not to replace the planter. The weight of the clay pebbles and the potting soil could cause damage to the planter.

## outdoor

- Drill holes in the bottom of the planter. Use a 8-10 mm metal/wood drill.
- Drill several holes, the number of holes depends on the size of the planter. Document available upon request.
- Cover the holes with mesh, to make sure the soil cannot clog the holes.
- Make sure that planters without feet do not directly make contact with the subsurface. Loose feet prevent this or a plant saucer can be used.
- If you directly place a planter without feet on the subsurface, we recommend to drill the holes at the side of the planter instead of in the bottom. This best can be done 5 to 10 cm above the ground.
- A piece of duct tape placed where you want to drill the hole, will help keep the drill bit from slipping.
- Fill the planter with 1/3 of hydro grain. The hydro grains contribute to the water management and make sure that your plants grow better.
- Then fill the planter with 2/3 of potting soil and place the plant in the planter.
- Lastly you can choose to cover the soil with a decorative layer of hydrograin, bark chips or groundcover plants.
- After filling the planter, we recommend not to replace the planter. The weight of the hydro grain and the potting soil could cause damage to the planter.
